

Syed Nouman Haider

Full Stack Developer | Software Engineering Student | AI/ML Enthusiast

Punjab, Pakistan | +92 333 0632477 | noumansyed069@gmail.com | GitHub: Nouman Syed70

SUMMARY

Motivated Software Engineering student with hands-on experience in AI/ML development, full stack web development, and multi-agent systems. Built production-level AI applications using Python, FastAPI, OpenAI, and RAG pipelines. Strong self-learner with proven ability to work independently, well-suited for remote AI/ML roles.

TECHNICAL SKILLS

Languages	C++, Java, Python, JavaScript, HTML, CSS
AI / ML	OpenAI API, Ollama, RAG (Retrieval-Augmented Generation), Multi-Agent Systems, Prompt Engineering
Frameworks	FastAPI, React, Tailwind CSS, Vite, WebAssembly (WASM)
Core Concepts	Object-Oriented Programming (OOP), Operating Systems, Data Structures, Web Development, Responsive Design
Tools	GitHub, MySQL, Git, VS Code, Claude

EDUCATION

Bachelor of Science in Software Engineering (B.S.S.E.)

University of Central Punjab, Lahore, Pakistan

Currently Ongoing – 5 Semesters Completed - 3.87 CGPA

ICS - Intermediate in Computer Science

Punjab Group of Colleges

CERTIFICATIONS & ACHIEVEMENTS

- Competitive Programming Participation (PF-PUCon '25)
- Prompt Engineering for ChatGPT (Vanderbilt University via Coursera)

PROJECTS

Aql-AI: Multi-Agent Decision Simulator

Stack: React, Tailwind, Recharts, FastAPI, OpenAI, Ollama, Tavily

- Built an AI digital boardroom running 4 specialized agents: Researcher (live web RAG via Tavily), Analyst (weighted scoring logic), Critic (risk and blind-spot stress-testing), and Synthesizer (final recommendation with confidence score).
- Engineered a FastAPI backend with multi-agent orchestration, RAG with live retrieval and resilience fallbacks, and precision scoring outputs.
- Shipped one-click 4-page strategic PDF report generation and an optional personal profile mode with Risk and Budget toggles.

Luminous Photo Editor: Browser-Based, GPU-Accelerated

Stack: React, Vite, Tailwind CSS, WebAssembly (WASM)

- Built a high-performance, privacy-first photo editing tool that runs entirely in the browser with no server uploads and images processed in-memory only.
- Leveraged WebAssembly and the device GPU for desktop-class image processing, including instant background removal, directly client-side.
- Designed with React and Vite for a lag-free workflow and Tailwind CSS for a clean, modern UI.

Game Trade Hub: Gaming Marketplace Web Platform

Stack: HTML, CSS, JavaScript

- Developed a gaming marketplace web platform with product listings, search functionality, and a responsive UI.
